Our Beautiful and Mysterious Universe: Enigmas of Dark Matter, Dark Energy and Multi-Verse

— **Ramesh Sharma**

Department of Mathematics
The University of New Haven

Abstract: This non-technical talk would begin with an introduction to our universe as a fabric of space and time including stars, galaxies and black holes; followed by the interesting discoveries of dark energy and dark matter which are puzzle-some and enigmatic. The talk would conclude with a more enigmatic, fascinating and exotic idea of a multi-verse (parallel universes) that includes our universe. Pictures of those objects would also be displayed.

Pre-requisites: Curiosity and Imagination.

Further Information
